

**Are you concerned about Bisphenol –A (BPA)**  
seepage and microleakage in a tooth colored/white dental fillings?

**No worries!**

We have the problem solved already!

**Silverfil is the foundation for a NON-TOXIC Aesthetic filling.**

**Aesthetic result ....and**  
**completely NON-TOXIC**

**SilverCORE**

Composite or GI

flowable composite (optional)

Silverfil Argentum

Silverfil Argentum protective base

Add the top of layer with tooth colored restorative composite or glass ionomer.

After applying the bonding agent, Apply a thin layer of flowable composite to eliminate any Irregularities. (optional)

Silverfil will provide a protective base for an aesthetic restoration. Excellent marginal seal will prevent seepage of BPA and microleakage. Silverfil can be compacted. (unlike resin material)

Silverfil base will provide a seal to protect dental pulp

## BENEFITS

### PATIENT

1. Provides an anti-microbial base
2. Protects the dental pulp from BPA seepage
3. Strengthens the restoration, Longer lasting
4. Prevent microleakage
5. Provides an aesthetic non-toxic filling
6. Prevents post-op sensitivity in deep cavities due to acid etching

### DENTIST

1. Silverfil displaces moisture
2. Saves time—less curing
3. Patient referrals from taking extra care
4. Use less material
5. Prevents post-op sensitivity in deep cavities due to acid etching
